

Summary Small and Medium Construction Project Descriptions

Proposed Block Projects (construction cost less than \$3m)

Not all block projects are included in the list below as the scope of some are considered to be self explanatory.

ATMS - Active Traffic Management System (SH1 and SH2)

Signs similar to the ones installed in Ngauranga Gorge. The signs can be remotely operated to give motorists warning of problems further ahead on the road, or to change speed limits to suit driving conditions.

Kent Terrace/Ellis Street Intersection (SH1)

Work would involve installing traffic signals at the current pedestrian crossing as well as improving the safety and the flow of traffic along Kent Terrace.

Old Hautere Road Intersection (SH1)

The project is aimed at improving the safety of the intersection of Old Hautere Road with State Highway 1 in Kapiti (just south of the Otaki River).

Roundabouts (SH1 and SH2)

It is intended that the building of roundabouts at these locations would reduce delays to traffic on side roads to the State Highways.

Street lighting (SH1 and SH2)

The installation of street lighting along the state highway can assist in reducing night time crashes.

Waikanae Weigh Station (SH1)

The installation of a replacement weigh pit due to the weigh station previously located at Lindale being removed as part of the interchange works.
